

# STEM Mixed Advisory

Why are  
we here?

# Vision Statement

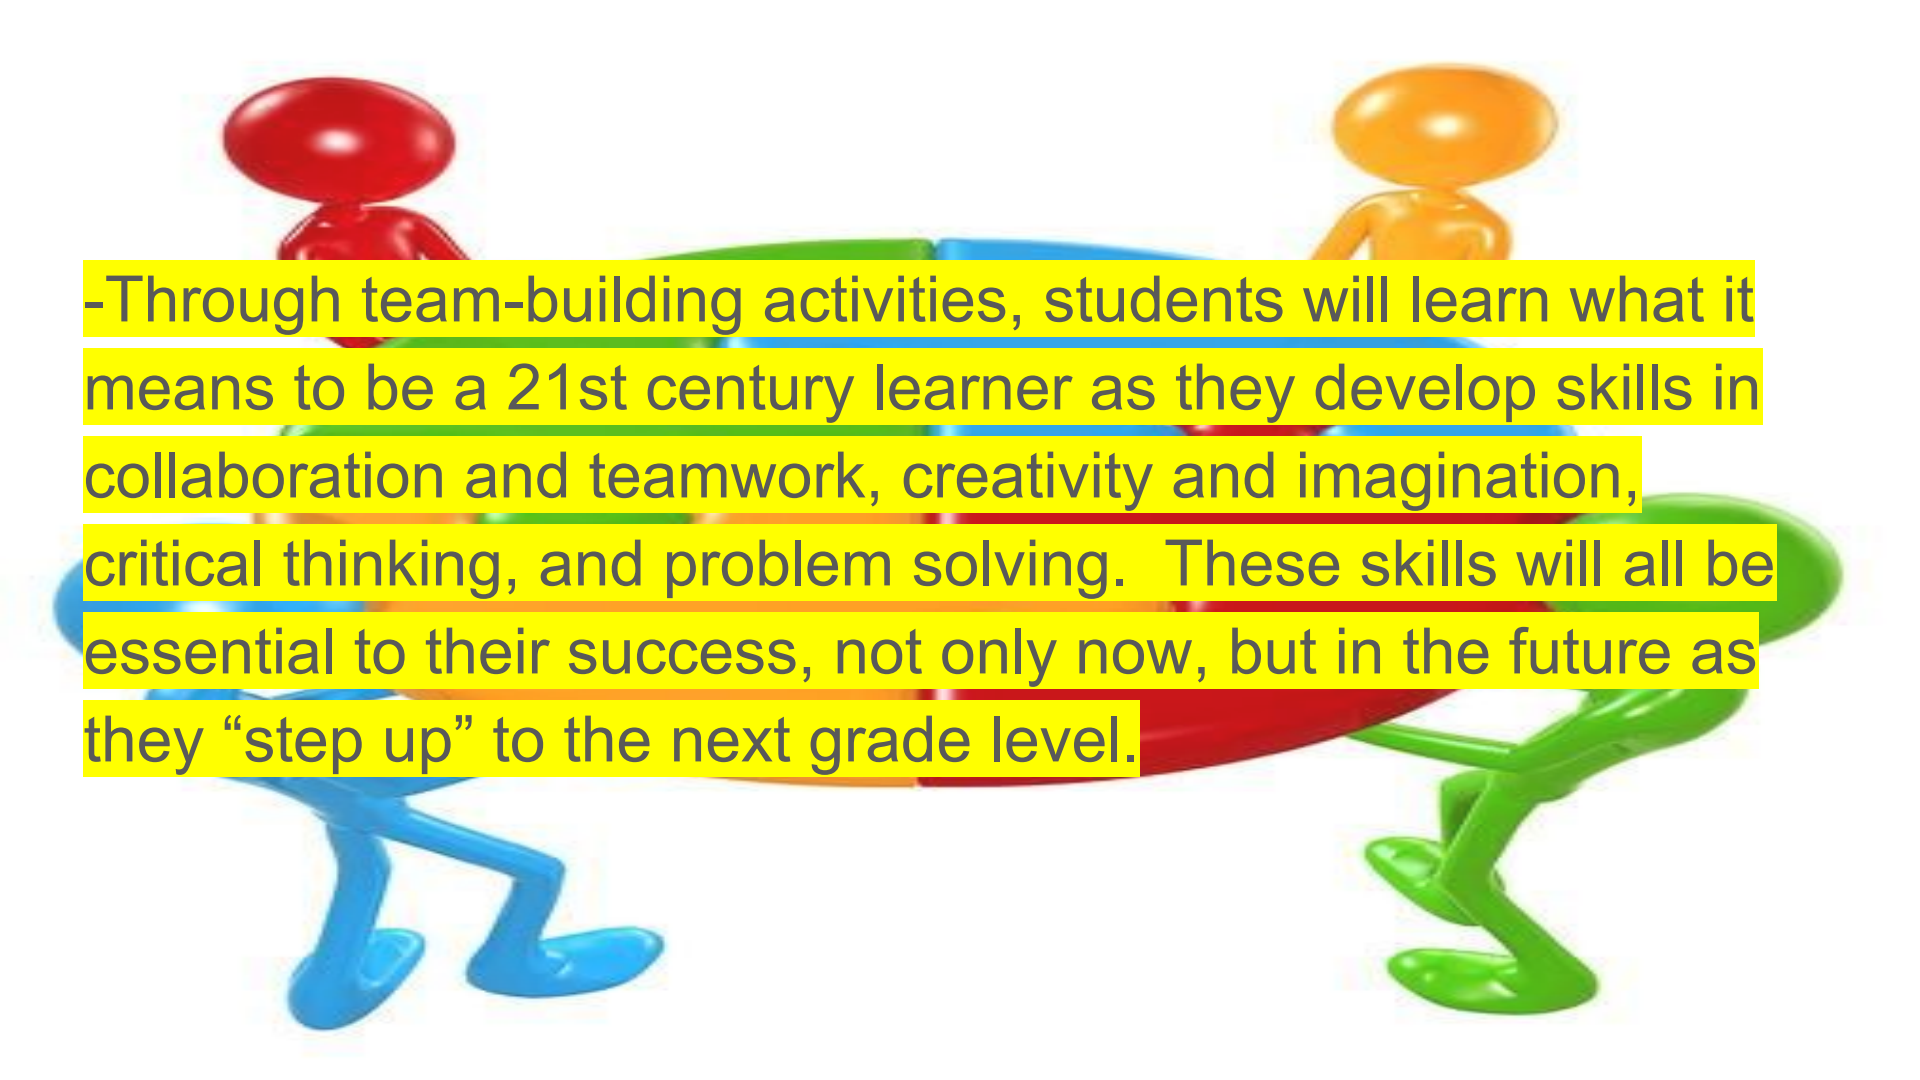

Through mixed grade levels, STEM Academy will seek to develop positive relationships and help develop students who are equipped for success.

# Mission Statement

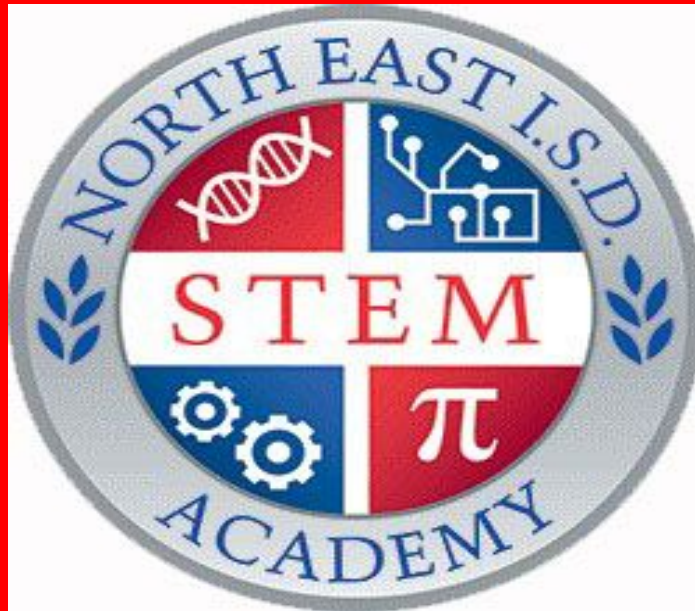

Through academic support from an advisor and peers, students will learn to write and track SMART goals, and learn tips for developing time management skills and study habits.

The image features four stylized, 3D-rendered human figures in red, orange, blue, and green. They are arranged around a large, multi-colored oval shape that is composed of segments in green, blue, red, and green. The figures appear to be interacting with or standing near this central shape. The background is plain white.

-Through team-building activities, students will learn what it means to be a 21st century learner as they develop skills in collaboration and teamwork, creativity and imagination, critical thinking, and problem solving. These skills will all be essential to their success, not only now, but in the future as they “step up” to the next grade level.

Through interactions with their peers, and through positive role modeling, students will learn the core values that are essential part of the STEM community.
